## Course Description

This course will introduce fundamental concepts and paradigms underlying the design of modern programming languages. For concreteness, we study the details of an object-oriented language (e.g. Java), and a functional language (e.g., Scheme). The overall goal is to enable comparison and evaluation of existing languages. The programming assignments will be coded in Java 5 and in Scheme.

---

## Prerequisites

- Data Structures and Algorithms. (Equivalently, CS400/600.)
  - Experience with programming in imperative languages such as C/C++, Pascal, or Ada.
-

## Course Load

The course load includes a mix of homeworks and programming assignments worth 30 points, a midterm worth 30 points and a final worth 40 points. Normally, CS680 students are assigned additional homework problems and are expected to solve additional/different problems in the tests.

## Grading

The letter grades will be assigned using the following scale: A[90-100], B[80-90), C[70-80), D[60-70), and F[0-60). However, I reserve the right to adjust the scale somewhat to utilize the gaps in the distribution. Academic dishonesty will be "rewarded" with a grade of "F". "Sharing/reuse" of solutions to assignment problems is strictly prohibited.

# Attendance Policy

All registered students are expected to attend all lectures. In case a student is absent from a lecture due to unavoidable circumstances, the student is still responsible for the material covered in the class, as it is typically available from the course web-page well in advance. Furthermore, the student is expected to find out about in-class announcements from their colleagues/instructor.

---

## Class Schedule and Syllabus

### Topic

- Class 1** Evolution of Programming Languages
- Class 2** Syntax Specification : Grammars
- Class 3** Object-Oriented Programming
- Class 4** Java Design Goals
- Class 5** Types, Values, Variables
- Class 6** Arrays; Classes
- Class 7** Inheritance; Polymorphism
- Class 8** Interfaces; Packages; Strings
- Class 9** **Midterm (July 11)**
- Class 10** Exceptions
- Class 11** Threads
- Class 12** (continue) (Scripting vs Systems PL)
- Class 13** Symbolic Data; List Processing
- Class 14** Styles : Functional vs Procedural
- Class 15** Recursive Definitions ( Scheme-Startup )(Examples)
- Class 16** Abstraction : Higher Order Functions
- Class 17** Scoping; Closures
- Class 18** Scheme Interpreter
- Class 19** (continue)
- Class 20** (continue)
- Class \*** Parameter Passing Mechanisms
- Class \*** Implementing Subprograms
- Final (August 15)**

## Assignments (Summer 2007)

- Assignment 1
- Assignment 2
